

TOGETHER-2022:

стійка трансформація як частина
глобальної технології перемоги

International Interaction Forum «TOGETHER-2022: Sustainable transformation as part of the global technology of victory»

October 27, online

Developing partnerships for sustainable transformation is our key goal!

How transformative action on climate processes, sustainable development and cooperation of business, community and government in the value chain can help grow and restore economies. A new nuclear era and an energy crisis are approaching against the background of delayed economic recovery and the risks of global climate change. However, the need to transform our value chains and systems that we've never been in before is very urgent.

Only together we can

- ⇒ Evaluate a progress, define ways to jointly eliminate barriers and outline joint roadmaps for actions across sectors and key value chains
- ⇒ Overcome populist resistance, which was formed over the years, instead of climate-responsible policies and effective actions
- ⇒ Explore EU and global best practices and discuss how key drivers such as policy, finance and innovation can create a trajectory of impact
- ⇒ Create a permanent demand for real modernization, adaptation to future climate crises, transition to RES, etc.
- ⇒ Create a roadmap for the implementation of Ukraine's declarations on decarbonization, modernization and European integration
- ⇒ Agree with colleagues on favorable frameworks and ways for business to inform critical societal processes

In the program of the event:

09.45-10.00
Opening of the forum

10.00 – 11.30
Strategic session
